

Abstract**MULTIPLE DISPLAY PANELS FOR DIFFERENT MODES OF OPERATION FOR
CONVEYING PERSONALITY**

5

A hybrid portable device utilizing separate display panels pre-assigned to respective operation modes for displaying associated information and selected cross-operation information is provided. The hybrid device typically provides mobile communication and PDA features. The device typically includes two display panels and a movable cover. The movable cover selectively overlays or exposes the display panels through a cut-away portion on the cover, or through an equivalent viewing means. The two display panels may be simultaneously visible to a user when the cover is flipped to expose a second display panel.
